## EXPERIENCE

### *Senior Software Engineer, Floship*

Hong Kong / Remote — 03/15 - 05/16

As part of a small engineering team, I worked as a full-stack engineer developing the company's user-facing application; as well as automating some of the operational needs.

#### Accomplishments

- Designed and executed a scalable front-end architecture for a single page application using Marionette.js and Django Rest Framework. Application is hosted on Heroku with assets served from AWS; using Grunt for the build.
- Automated orders' approval and packaging processes, reducing review time by account managers to a third.
- Wrote integrations with third party services such as Braintree and 3DBin.

### *Participant, Recurse Center*

New York, NY — 10/14 - 12/14

The Recurse Center is a free, self-directed, educational retreat for people who want to get better at programming. I focused on improving my backend skills by writing some Node JS packages.

### *Software Platform Engineer, NetSuite Inc.*

Montevideo, Uruguay — 06/12 - 09/14

Developed NetSuite's SuiteCommerce Advanced platform, a large Backbone.js application with its own RESTful API.

#### Accomplishments

- Developed several of the core modules. They required unit tests, documentation and knowledge transfer.
- Led a five person team in charge of developing enhancements and new features.
- Traveled to Oklahoma City to train a team of four developers from an acquired company. The goal was to help them dive into our platform and build a CMS prototype on top of it, which we successfully did.

### *Web Developer, SuiteCommerce*

Montevideo, Uruguay — 07/09 - 06/12

Developed highly customized eCommerce stores. This included wishlists, rating/review systems, multi-step product configurators and client specific business logic.

#### Accomplishments

- Developed several "bundles", i.e. reusable data structures

---

## SKILLS

**Strong knowledge** of libraries such as jQuery, Backbone, Underscore and pre-processors Grunt and Sass.

**Proficient** in the vanilla web stack: HTML, CSS and JavaScript.

**Good understanding** of E-commerce, working on REST APIs, Scrum agile methodology, front end performance best practices, SMACSS and responsive web design.

## PROJECTS

[adiaz uy](http://adiaz uy)

My personal site and blog. Wrote a [short article](#) on the stack used.

[TaTeTi](#)

Using Node.js and Socket.io, I built a simple Web App where users can play Tic Tac Toe against each other.

[svgclean](#)

Cleans up exported svg files by removing useless tags and attributes. Also creates CSS class names based on fill attributes.

and code to be installed in our customer's accounts.

- Traveled to Chicago to train the people that would do the maintenance for one of the sites I developed.
- Traveled to San Francisco as SuiteCommerce's technical lead for SuiteWorld, NetSuite's yearly customer gathering.
