EXPERIENCE

Software Engineer, Aloft Ed. Inc.
Remote — 07/16 - Present

As the lead frontend engineer my duty is to enrich the company's MVP while at the same time granularly migrate it to a more robust solution, compliant with today's web app standards.

Senior Software Engineer, Floship
Hong Kong / Remote — 03/15 - 06/16

As part of a small engineering team, I worked as a full-stack engineer developing the company's user-facing application; as well as automating some of the operational needs.

Accomplishments
- Designed and executed a scalable front-end architecture for a single page application using Marionette.js and Django Rest Framework.
- Automated orders' approval and packaging processes.
- Integrated third party services such as Braintree and 3DBin.

Participant, The Recurse Center
New York, NY — 10/14 - 12/14

The Recurse Center is a free, self-directed, educational retreat for people who want to get better at programming. I focused on improving my backend skills by writing some Node JS packages.

Software Platform Engineer, NetSuite Inc.
Montevideo, Uruguay — 06/12 - 09/14

Developed NetSuite's SuiteCommerce Advanced platform, a large Backbone.js application with its own RESTful API.

Accomplishments
- Developed several of the core modules. They required unit tests, documentation and knowledge transfer.
- Led a five person team in charge of developing enhancements and new features.
- Traveled to Oklahoma City to train a team of four developers from an acquired company.

Web Developer, SuiteCommerce
Montevideo, Uruguay — 07/09 - 06/12

Developed highly customized eCommerce stores, catering to client specific business requirements.

SKILLS

Strong knowledge of libraries such as jQuery, Backbone, Underscore and pre-processors Grunt and Sass.

Proficient in the vanilla web stack: HTML, CSS and JavaScript.

Good understanding of E-commerce, working on REST APIs, Scrum agile methodology, front end performance best practices, SMACSS and responsive web design.

PROJECTS

adiaz.uy
My personal site and blog. Wrote a short article on the stack used.

TaTeTi
Using Node.js and Socket.io, I built a simple Web App where users can play Tic Tac Toe against each other.

svgclean
Cleans up exported svg files by removing useless tags and attributes. Also creates CSS class names based on fill attributes.
